

A-21-05

10mm OPEN CARBON PRESET

QUICK REFERENCE DATA

Resistance range (E3-series), linear law	47 Ω – 4,7 M Ω
Maximum dissipation at 40 °C	0,1 W
Climatic category, IEC 68	25/070/21

APPLICATION

These potentiometers are for preset resistance control with provision for re-adjustment. They are particularly suitable for use in radio and television receivers.

DESCRIPTION

These potentiometers have a resistance element of a special carbon composition with a low temperature coefficient. The element is riveted to a base plate of resin bonded paper.

The potentiometers are provided with printing-wiring pins; pins a and c (see drawings) are connected to the ends of the carbon track, pin b is connected to the wiper. The wiper, which is provided with a double contact, has a screwdriver slot or a plastic knob for adjustment.

This potentiometer series includes types for vertical and for horizontal mounting on printed-wiring boards. The resistance law is linear and the tolerance on the nominal resistance is $\pm 20\%$, however log. versions and 10% tolerance versions are also available.

Note: The potentiometers are supplied with the wiper positioned at 50% of the angle of rotation.

7Z85818

COMPOSITION OF THE CATALOGUE NUMBER

Note: catalogue number of knob type 1 (Figs 4, 5, 9): 4322 047 00190;
catalogue number of knob type 2 (Figs 6, 10): 4322 047 27740.

MARKING

The potentiometers are marked with the nominal resistance value punched on the wiper.

TECHNICAL DATA

Unless otherwise specified all electrical values apply at an ambient temperature of 15 to 35 °C, an atmospheric pressure of 86 to 106 kPa and a relative humidity of 45 to 75%.

Table 1

nom. resistance R_{nom}	max. voltage (V) at 40 °C	max. terminal resistance Ω	limiting wiper current (mA) at 40 °C	code in catalogue number

TESTS AND REQUIREMENTS

Clause numbers of tests and conditions of test refer to IEC 393-1 (potentiometers; part 1: terms and methods of test).

The potentiometers have been tested whilst mounted by their terminations on a printed wiring board. When drying is called for, procedure 1 of IEC 393-1, sub. 5.2 is used (24 ± 4 h, sub. 55 ± 2 °C, R.H. $\leq 20\%$). When the contact resistance variation (CRV) is measured, the wiper is rotated in both directions over 90% of the effective resistance.

IEC 393-1 clause	IEC 68-2 test method	test	procedure	typical result
6.22.3	Ta	Solderability	solder bath: 235 ± 5 °C, $2 \pm 0,5$ s	good tinning
6.22.4	Tb	Resistance to heat	solder bath: 260 ± 5 °C 5 ± 1 s	$\frac{\Delta R_{ac}}{R_{ac}} \leq 0,5\%$
6.25	Eb	Bump	acceleration 40g number of bumps: 4000	$\frac{\Delta R_{ac}}{R_{ac}} \leq 2\%$
6.24	F	Vibration	frequency: 10 to 500 Hz amplitude: 0,75 mm or 10g, 3 directions, 2 h per direction	$\frac{\Delta R_{ac}}{R_{ac}} \leq 2\%$ $\frac{\Delta V_{ab}}{V_{ab}} \leq 0,3\%$
6.13	—	Temperature characteristics of resistance	temp. cycle: $+20$ °C; -25 °C; $+20$ °C; $+70$ °C; $+20$ °C	$-500 < TC < +300 \cdot 10^{-6} / K$
6.26 6.26.2 6.26.3 6.26.4 6.26.6	— Ba Db Aa Db	Climatic sequence Dry heat Damp heat acc. 1st cycle Cold Damp heat, remaining cycle	16 h at 70 ± 2 °C 24 h at 55 ± 2 °C $95 - 100\%$ R.H. 2 h at -55 ± 3 °C 24 h at 55 ± 2 °C $95 - 100\%$ R.H.	$\frac{\Delta R_{ac}}{R_{ac}} \leq 5\%$ operating torque ≤ 25 mNm
6.30	—	Electrical endurance	T_{amb} : 70 °C, 1000 h, cycle ($1,5$ h on and $0,5$ h off, b at $0,67$ a — c) Load: $0,05$ W between a and c Load: $0,033$ W between a and b	$CRV < 1\%$ of R_{ac} $\frac{\Delta R_{ac}}{R_{ac}} \leq 10\%$ $\frac{\Delta V_{ab}}{V_{ac}} \leq 0,5\%$ $\frac{\Delta R_{ab}}{R_{ab}} \leq 10\%$

IEC 393-1 clause	IEC 68-2 test method	test	procedure	typical result
6.29	—	Mechanical endurance	200 cycles, 4 cycles/min, no load	$\frac{\Delta R_{ac}}{R_{ac}} \leq 3\%$ $CRV < 0,5\%$ of R_{ac}
